What does this fund invest in?

The Equitable Life Active Balanced Portfolio will actively manage allocations between multiple asset classes based on the relative appeal of each category based on market conditions and the portfolio manager's outlook for that asset class. The portfolio manager may use fundamental and technical analysis in addition to quantitative measures to establish the positioning bias of the fund. Exposures to particular asset classes will be achieved through the use of exchange traded funds where a suitable vehicle is available.

The objective of the fund seeks long-term capital appreciation and income by investing in a diversified portfolio of fixed income, equity and real estate related investments. The portfolio may assume limited exposures to commodity related investments or other alternative asset classes.
